

Chi-Cheng Huang

Taiwan

Dr Chi-Cheng Huang is a distinguished surgeon and researcher, specializing in general surgery, breast surgery, preventive medicine, and bioinformatics. His expertise in bioinformatics spans genomic sequencing, transcriptional analysis, molecular structure prediction, and cancer model design. Currently, he serves as the Chief of the Breast Medical Center at Taipei Veterans General Hospital, showcasing his leadership in breast cancer treatment.

Dr Huang's academic journey includes a medical degree from Chang Gung University and a Ph.D. in Biomedical Electronics and Bioinformatics from Taiwan University. His research has significantly advanced breast cancer understanding, with over 50 publications in prestigious journals like *Annals of Surgical Oncology* and *Life Sciences*. His work ranges from genetic risk analysis in breast cancer to innovative applications of deep learning in cancer diagnosis.

Beyond research, Dr Huang holds key positions in professional societies, including directorships in the Taiwan Breast Cancer Society and Taiwan Hernia Society. His innovative spirit is further evidenced by his patent for using probiotics to inhibit colorectal cancer metastasis. Dr Huang's multifaceted contributions underscore his commitment to advancing breast cancer treatment through cutting-edge research and clinical leadership.
